Hi!

I'm Pol Bosch, a software developer passionate about programming, design and many other things.
Following this passion, I went to university, graduated, and now I am in a formation to further grow my knowledge. From working with my amazing peers in the multiple teams I've been, to programming and designing the core systems and features of a variety of projects and maintaining the software testing.

I'm now applying for the **Junior Developer** position in **Ogilvy** because I think it is a great opportunity for me to grow, both professionally and personally. I'm eager to _team up_ with the highly skilled people at Ogilvy and _further develop my technical skills_, but also I see it as a great chance to _personally grow_ from your ambitious creativity and strategy, doing something new and out of my comfort zone, working with really good people, and is in this kind of challenges in which one learns a lot.

As I mentioned, I have experience in the programming field, especially in **C++** and **C# with Unity3D** with most of my **university and personal projects** during 6 years. I especially enjoy dedicating myself to designing and programming complex features since it takes out from me all the _passion I've got for problem solving_, really, my final project was about fitting "infinite" players inside a screen, each of them having their own partition (see the [result]).
At University, I have studied a **Videogames Design and Development** degree in the **_Universitat Politècnica de Catalunya_**, in Barcelona, where I discovered my passion and desire about design and programming, which motivated me a lot. One of the peak proud things I had during my time in University was when we simulated a game studio of 30+ people and I was appointed as technical designer for a project using our custom game engine to develop a game in it, and all in 4 months (see the [result])!
I am now currently in the **APPSFactory** Formation at **Aspasia** learning Mobile and Web Development using HTML CSS and JavaScript with the React framework to focus my knowledge in this market.

Now, following my passion and my desire to keep building up my professional career, I'm applying for the **Junior Developer** position in your company, expecting to find the path to improve and to match the skills you need. If I do, I would be glad to meet you for a chat!

Thank you and kind regards!
Pol Bosch.
